

Zaman Zahid

703-231-6100 | Alexandria, Virginia | its.zaman001@gmail.com | github.com/zamanzahid

Education

Thomas Jefferson High School for Science and Technology	GPA: 3.9
Technical Skills	Alexandria, VA
	Graduation June 2028

Languages: Python, Java, TypeScript/Javascript, C/C++, HTML/CSS
Frameworks: React/Next.js, Tailwind CSS, Chart.js, Three.js, Node.js, Django, FastAPI, Flask
AI/ML/ Libraries: PyTorch, Scikit-Learn, OpenCV, YOLO, Pandas, Numpy, matplotlib, tensorflow, three.js, chart.js
Developer Tools: Git, Docker, Linux/Unix, Firebase, VS Code, CAD, KiCAD, Git
Other: Git Team Collaboration, Proficient in English, Spanish, Hindi, Engineering & Technical problem solving

Projects

Sentinel AI Safety & Threat Detection System	June 2026 - July 2026
• Built a real-time threat detection platform using YOLOv8 for object detection and DeepFace for facial and emotion recognition • Used a Llama Vision LLM to analyze video and audio for suspicious behavior and emergency situations • Built an operations dashboard for live incident monitoring, risk scoring, and responder tracking	
AeroGaze Offline Constellation Navigation & Messaging System	June 2026
• Built an offline navigation engine that calculates exact coordinates using photos of the night sky, using NumPy and SciPy for star detection. • Also built Relay, an offline messaging system that sends encrypted messages over Bluetooth/Wi-Fi mesh similar to how an AirTag works, until reaching the internet. • Used AES-256-GCM and X25519 encryption so relay devices only ever see encrypted messages.	
RoboSoto Autonomous Robotics System	February 2026 - May 2026
• Built an autonomous robot using the Romeo ESP32-S3 microcontroller with wireless control and added control software • Integrated a BNO055 IMU and other sensors for real-time movement, orientation and navigation. • Developed and tested iterative improvements for navigation and system reliability	
SimpleNotes Distraction-Free Notes Taking App	March 2026 - April 2026
• Built a lightweight note taking web app in React and TypeScript with no account required • Used local storage so notes save automatically and stay on the device without the internet • Designed a minimalist, distraction-free interface with simple features	
GestureX Accessibility System	January 2026
• Built a CV system enabling hands-free control of a computer using hand and eye tracking via webcam • Implemented gesture-based controls for mouse movement, clicking, and typing using MediaPipe and OpenCV • Added hand tracking, eye tracking, and control modules into one Python application for real-time interaction	
AegisZero Cybersecurity Chrome Extension	November 2025
• Developed a unified cybersecurity platform combining multiple security tools into one interface • Built backend architecture and integrated multiple security services into a single workflow • Built a Chrome extension using Manifest V3 that scans URLs for scam and phishing patterns	

Extracurricular Activities

- Data Analytics - Vice President (2025 - Now)
- Atlas Autoware - Officer (2024 - Now)
- EVGP - Co-Lead for Engineering & Software (2025-2026)
- JV Lacrosse - Captain (2024 - 2026)
- SysAdmins Understudy (2024 - 2026)
- TSA - Technology Student Association (2022-2024)
- Rocketry Club - Vice President (2022-2024)

Achievements and Awards

- President's Education Award - 2022
- Hackathons:**
- 1st place @ Crab Hacks 2024
- Best Environmental @ Hack the Nest 2025
- 5th place @ Humanity 2025
- Best Use of Gemini and 3rd Place @ TillyHacks 2026
- Most Useful and 3rd place @ BlaireHacks
